with host volume : <http://52.207.213.148:32780/>  
docker image name : nikhilesh100/employee\_training\_managment

### Errors:

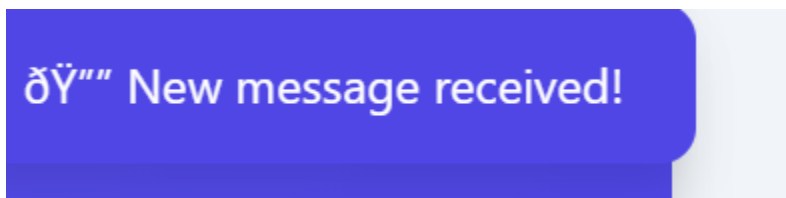

#### 1. Notification to staff:

##### 1. Symbol Issue Near Heading

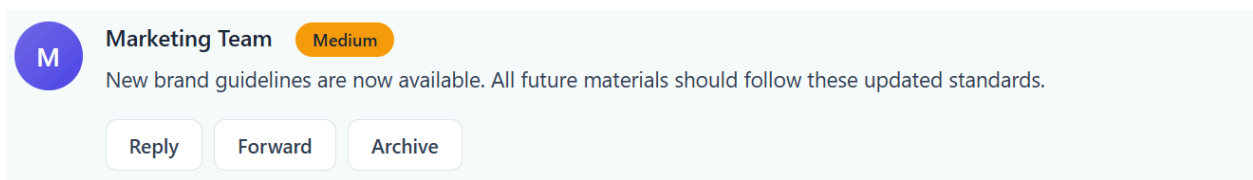

- Issue: There is an unwanted or inappropriate symbol next to the heading “*Notification Center*”.
- Suggested Fix:
  - Remove the existing symbol.
  - Replace it with the official company logo or an appropriate icon that aligns with the UI/UX guidelines.

## 2. Incorrect Symbol Before Notification Message

- Issue: When a new notification is received, the system shows a message “*New message received*” which is good. However, there's an unwanted or incorrect symbol displayed before this text.
- Suggested Fix:
  - Remove or replace the symbol to maintain consistency.
  - Use a clean and minimal icon (like a bell or envelope) if a visual cue is needed.

## 3. Action Buttons Not Working

- Issue: The following buttons are not functioning:
  - Reply
  - Forward
  - Archive

- Suggested Fix:
  - Check for missing JavaScript functions or backend connections.
  - Ensure buttons are correctly linked to their respective actions or APIs.

## **Suggested Improvements**

### **4. Add Login Functionality**

- Implement a login page for the Notification Center.
- Login Method: Use Employee ID and Password authentication.
- This will ensure secure access and help personalize notifications.

### **5. Reply Feature for Notifications**

- Allow users to reply directly to notifications.
- Can be integrated with email or internal chat depending on system requirements.

### **6. Add Filters for Better Usability**

- Implement filter options such as:
  - Date Range
  - Notification Type
  - Sender
- These filters will help users manage and view notifications more efficiently.

## 2. HR payslip generator :

. i did not find any error its working good

## 3. EMPLOYEE PAYSリップ PORTAL :

The Employee ID input field currently accepts:

- Special characters (e.g., @, #, %)
- Unlimited number of characters

**EMPLOYEE PAYSリップ PORTAL**

Employee ID:

Month:

Year:

ATS00000000000000000000\$%%%%%^&\*

January
